

## The basics of LEATHER care

*Natural leather is stylish, authentic, and quite demanding. Good care is essential for a long-lasting leather life. Here's everything you need to know about proper leather care:*

- Rule # 01:** Provide regular and protective care.  
Once the beauty is gone, it may be too late.
- Rule # 02:** First you clean, then you do the care.  
Care products are most effective when the leather is thoroughly clean.
- Rule # 03:** Dust leather once a week with a dry and soft cloth or with the soft brush of your Hoover. A slightly damp cloth also will work, but only use distilled water to prevent limescale marks.
- Rule # 04:** Clean, treat and protect leather furniture twice a year using appropriate care products. Please note that cleaning and care must be tailored to the specific characteristics of the leather quality.

You can find recommended care **products from KERALUX®** by clicking on this link:  
<https://www.moebelpflegeshop.de/en>

Click on **Product**, then **Product finder**, then **Manufacturer** and select **fine**.  
The drop-down menu will display the leather qualities we offer.  
Click on a name, and the matching products will appear.

### More expert tips

- **Prevent dryness:** Excessively dry environments can result in leather becoming brittle. Care on a weekly basis helps to prevent this. Also, too much moisture can damage the leather.
- **Always test** cleaning products on a hidden spot before applying them to a visible area.
- **Avoid microfibre cloths** as they can damage the leather.
- Watch out for **colourful clothing or accessories** that can leave marks. Cover the leather or use strong protection.
- **Protect from sun and heat.** Sunlight and artificial light can bleach and dehydrate the leather. Maintain at least 30 cm distance from heat sources and ensure air circulation under the furniture.
- **Leather is prone to scratches** from pets, zips and sharp objects. Please avoid contact.
- **Treat stains immediately.** Dab up liquid with a paper towel and clean with the appropriate KERALUX® product. Avoid applying pressure, as this can push the stain deeper into the leather.
- **Be cautious with household remedies:** They can cause more harm than good, depending on the type of leather.
